

# HOUSE & GARDEN REPORT SHOOTING POWDER

## WHEN TO APPLY SHOOTING POWDER

In the final 3 weeks of the flowering phase (growth cycle). When you want to significantly increase the fruit weight in the final 3 weeks.

## SHOOTING POWDER

The secret of every successful grower is Shooting Powder. This sparkling Bud Expander is the absolute best in the field of flowering stimulators. It gives visible results, can be combined with all base nutrients, is packed in handy sachets, simple to use, and has been extensively tested. It has moreover earned our customers' complete satisfaction. In brief, a good supplement to the nutritional plan of any successful grower.

## PRODUCT INFORMATION

This flowering booster starts a new flowering cycle after the regular flowering phase, significantly increasing the fruit's weight. The extra yield after applying this agent will surprise you. It actually creates a new layer on top of the existing fruit. Output increases of up to 30% can be reached this way.

## APPLICATION

Adjust the EC-value to 1.2 of the base nutrient (e.g.: Soil A&B, A&B Hydro, Coco A&B). Use Shooting Powder in the last 3 weeks before harvest 1 sachet per 100L (25 gallons) the final 2 weeks before harvest 2 sachets per 100L (25 gallons). First add the base nutrient to your container (e.g.: Soil A&B, A&B Hydro, Coco A&B). Adjust the EC-value to 1.2 of the base nutrient. Adjust the pH-value of the nutrient container. Finally, add Shooting Powder. Add any other flowering stimulators. Your nutrient container is ready for a first watering.

## ABOUT HOUSE&GARDEN

## ADVICE

Only apply Shooting Powder when your plants are **SUFFICIENTLY HEALTHY**.

It is a very strong agent that requires a lot from your plants.

## WARNING

Always adjust the EC-value of the **BASE NUTRIENT** to **EC 1.2!!**

**USE SHOOTING POWDER IN THE FINAL 3 WEEKS OF THE GROWTH CYCLE!!!**

**DO NOT USE SHOOTING POWDER IN COMBINATION WITH PK 13-14, TOPBOOSTER OR TOP SHOOTER!!!**

Strictly adhere to the recommended dosage; it concerns **A VERY POWERFUL AGENT!**

**NEVER USE AN OXYGEN PUMP** in the nutrient container or on the growth table. This may have serious consequences for the stability of the nutrients (pH- and EC-values).
