

HOUSE & GARDEN REPORT TOP BOOSTER

TOP BOOSTER

House&Garden Top booster is an excellent flowering stimulator which acts on the basis of potassium and phosphorus and Eddha-Fe (iron). These elements are important for the plant's flowering; potassium for the beginning of the flowering stage and phosphorus for the proper development of fructification, while the Eddha-Fe additive ensures a better colouring of the leaves.

PRODUCT INFORMATION

H&G Top booster creates an optical drought giving the plant the impression that the last phase of its life cycle has started. To ensure its survival, the plant will therefore begin forming flowers and fruits to reproduce. Add H&G Top booster for two to three days and then return to the usual nutrient composition. The plant will continue to form fruits and flowers. As this aspect of the final phase of the plant's cycle starts earlier, the fruits and flowers have more time to become larger.

APPLICATION

Use Top booster 4 weeks before harvest during 3 to 4 days. Prepare your nutrient container as follows: First add the base nutrient to your container (e.g.: Soil A&B, A&B Hydro, Coco A&B). Adjust the EC- and pH-value of the nutrient container. Finally, add Top booster. Your nutrient container is ready for a first watering.

ABOUT HOUSE&GARDEN

House&Garden disposes of its own fertilizer plant, which offers many advantages. The production process can be checked from start to finish.

The benefit for you is that we can guarantee:

- the use of high-quality components at all times;
- constant nutrient values at all times;
- immediate product delivery at all times.

So, in short: quality, stability and continuity for your garden.

ADVANTAGES OF TOP BOOSTER FLOWERING STIMULATOR

- Top Booster is a very powerful flowering stimulator.
- Top Booster uses the best nutrient components in the purest form that is available on the market.
- Top Booster has a constant high quality.
- Top Booster is packaged in a light-proof packaging ensuring its quality.
- Top Booster has a sealed lid to guarantee that the product stays fresh.
- Top Booster is easy to use.
- Top Booster is very pure ensuring clean piping.
- Top Booster is highly concentrated and therefore very economical to use.

ADVICE

Use Top booster 4 weeks before harvest during 3 to 4 days. This is the period that the plant is in its prime and can optimally make the transition from growth to flowering and fructification. This way, you can determine the start of the flowering phase. Top booster also contains potassium for the beginning of the flowering stage and

phosphorus for the proper development of fructification. The Eddha-Fe additive ensures a better colouring of the leaves.

WARNING

NEVER USE IN COMBINATION WITH PK 13-14 OR TOP SHOOTER OR SHOOTING POWDER WHEN SWITCHING FROM TOP BOOSTER TO TOP SHOOTER OR SHOOTING POWDER.

NEVER USE AN OXYGEN PUMP in the nutrient container or on the growth table. This may have serious consequences for the stability of the nutrients (pH- and EC-values).

EU DOSAGE NUTRIENT READY FOR USE

Dosage Diagram of Top Booster flowering stimulator

1.5 ML	for	1 Litre
15 ML	for	10 Litres
150 ML	for	100 Litres
1.5 L	for	1000 Litres

US DOSAGE NUTRIENT READY FOR USE
