

HOUSE & GARDEN REPORT HYDRO A & B

HYDRO NUTRIENT A&B

House&Garden Hydro Nutrient A&B is an absolute must-have for all self-respecting professional gardeners. The smart composition of the various elements provides commercial gardeners with the ideal means of ensuring the optimal nourishment of the plants both in the growth and the flowering period.

PRODUCT INFORMATION

Why does House&Garden offer you the best start for your plants?

H&G Hydro A&B Base Nutrient is composed of liquid main and trace elements and contains no bulking agents like solid fertilizers. H&G Hydro A&B is composed of the purest high-quality nutrients that are available on the market, including Eddha-Fe (iron). This way, you enable the plant to absorb the nutrients fast and effectively. So if you want the best for your plants, House&Garden Hydro A&B is an excellent solution and a great basis for a successful growth.

APPLICATION

When preparing the nutrient container, fill it for two-thirds with water. First add A; circulate well. Then add B; circulate well. Adjust the EC-value - start of the growth (1.2) increasing schedule end of bloom phase (2.0). Harmonise the pH-value of the nutrient with pH-(Down) or pH+(Up) (5.7-6.7). Top up the container with water. Add any root, growth or flowering stimulators. Your nutrient container is ready for a first watering.

ABOUT HOUSE&GARDEN

House&Garden disposes of its own fertilizer plant, which offers many advantages. The production process can be checked from start to finish.

The benefit for you is that we can guarantee:

- the use of high-quality components at all times;
- constant nutrient values at all times;
- immediate product delivery at all times.

So, in short: quality, stability and continuity for your garden.

ADVANTAGES OF HYDRO NUTRIENT A & B

- Hydro A&B is composed of liquid elements (no bulking or binding agents).
- Hydro A&B uses the best nutrient components in the purest form that is available on the market.
- Hydro A&B has a constant high quality.
- Hydro A&B is packaged in a light-proof packaging to ensure its quality.
- Hydro A&B has a sealed lid to guarantee that the product stays fresh.
- Hydro A&B is easy to use.
- Hydro A&B is very pure ensuring clean piping.

House&garden Hydro A&B is highly concentrated and therefore very economical to use.

ADVICE

Wet the rock wool slates well (90% humidity), this is important for the future absorption capacity of the slates. Consequently, keep the rock wool slates a little dryer so that the slip's roots need to 'work' to find nutrients and water (preventing the plants from becoming 'lazy').

WARNING

Never use an oxygen pump in the nutrient container or on the growth table.

This may have serious consequences for the stability of the nutrients (pH- and EC-values).

ENSURE THAT YOUR EC- AND PH-GAUGE IS WELL-CALIBRATED WHEN PREPARING THE NUTRIENTS.

Do not add A&B at the same time, this triggers a chemical reaction in the nutrient resulting in sediment, incomplete nourishment and clogged piping.
